

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Catholic Church Member Information and Management System

Document Type	Software Requirements Specification
System	Catholic Church Member Information and Management System
Version	1.0
Date	September 2026

1. Introduction

1.1 Purpose

This Software Requirements Specification defines the functional and non-functional requirements for the Catholic Church Member Information and Management System. It translates the project concept into requirements that guide analysis, design, development, testing, deployment, and maintenance.

1.2 System Overview

The system will provide a centralized digital register of Church members and their communities. The proposed hierarchy is Diocese → Deanery → Parish → Zone → Small Christian Community → Family → Church Member. It will also manage Church associations and leadership positions.

1.3 Scope

The system covers organizational-unit management, Family and member registration, member profile information, Church associations, leadership positions, searching, filtering, reporting, access control, data validation, change history, privacy, and backups. These areas are based on the supplied concept note.

2. Stakeholders and Users

- Authorized Church administrators and officials at relevant organizational levels.
- Parish, Zone, and Small Christian Community leaders responsible for member information.
- Church personnel responsible for Family and member records.
- Church members, who benefit indirectly through improved administration and service delivery.

Exact permissions for each user type will be finalized during detailed requirements analysis.

3. Functional Requirements

3.1 Organizational Structure Management

- FR-01: The system shall allow authorized users to create and manage Diocese records.
- FR-02: The system shall allow authorized users to create and manage Deanery records and associate them with a Diocese.

- FR-03: The system shall allow authorized users to create and manage Parish records and associate them with a Deanery.
- FR-04: The system shall allow authorized users to create and manage Zone records and associate them with a Parish.
- FR-05: The system shall allow authorized users to create and manage Small Christian Community records and associate them with a Zone.
- FR-06: The system shall allow authorized users to create and manage Family records and associate them with the appropriate Small Christian Community.
- FR-07: The system shall represent the hierarchy from Diocese through Family to Church Member.

3.2 Church Member Management

- FR-08: The system shall allow authorized users to register a Church member.
- FR-09: The system shall capture first name, middle name, and last name.
- FR-10: The system shall capture date of birth.
- FR-11: The system shall capture marital status, including Single or Married.
- FR-12: The system shall capture phone number and email address.
- FR-13: The system shall capture house number, street, ward, district, and region.
- FR-14: The system shall record baptism status as baptized or not baptized.
- FR-15: The system shall record the member identification number, including the offering number or digital offering number.
- FR-16: The system shall associate a member with the appropriate Family and Church organizational units.
- FR-17: The system shall allow authorized users to view and update member profiles.

3.3 Church Association Management

- FR-18: The system shall maintain records of Church associations.
- FR-19: The system shall support UWAKA, WAWAKA, TCMS, and UKWAKATA.
- FR-20: Authorized administrators shall be able to add, update, and deactivate association records.
- FR-21: The system shall associate members with relevant Church associations according to approved Church rules.

3.4 Leadership Position Management

- FR-22: The system shall maintain leadership positions separately from personal member information.
- FR-23: The system shall support positions such as Priest, Deacon, Catechist, Community Elder, Chairperson of a Church Association, and other approved positions.
- FR-24: The system shall associate a member with a leadership position where applicable.
- FR-25: Authorized administrators shall be able to add and update approved leadership positions.
- FR-26: Where required, the system shall associate a leadership position with the relevant Church organizational unit.

3.5 Search, Filtering and Reporting

- FR-27: The system shall allow authorized users to search for Church members.

- FR-28: The system shall allow filtering by relevant Church organizational units.
- FR-29: The system shall provide access to member and Family information according to permissions.
- FR-30: The system shall generate authorized administrative and pastoral reports from available data.

3.6 Authentication, Authorization and Data Control

- FR-31: The system shall authenticate users before granting access to protected functions.
- FR-32: The system shall enforce role-based access control.
- FR-33: The system shall restrict users from viewing or modifying information outside their authorization.
- FR-34: The system shall validate important member information and identifiers.
- FR-35: The system shall enforce uniqueness for important member identification numbers.
- FR-36: The system shall retain appropriate change history for important updates.
- FR-37: The system shall support regular data backup.

4. Non-Functional Requirements

4.1 Security and Privacy

- NFR-01: The system shall protect personal information from unauthorized access.
- NFR-02: Protected administrative functions shall require authentication.
- NFR-03: Role-based permissions shall be consistently enforced.
- NFR-04: Personal data shall be handled and stored securely.
- NFR-05: Important record changes shall be traceable through appropriate audit information.
- NFR-06: Backup and recovery procedures shall reduce the risk of data loss.

4.2 Usability

- NFR-07: The interface shall be clear and understandable to authorized Church personnel.
- NFR-08: Common tasks such as registration, searching, viewing, and updating shall be straightforward.
- NFR-09: Forms shall provide clear labels, validation feedback, and understandable error messages.

4.3 Performance

- NFR-10: Normal search and retrieval operations shall respond within an acceptable time under the expected workload.
- NFR-11: Routine registration, updating, searching, and reporting shall remain responsive.

4.4 Reliability and Availability

- NFR-12: The system shall preserve data consistency during record creation and updates.
- NFR-13: The system shall provide mechanisms for regular backup and recovery.
- NFR-14: The system should remain available during normal operating periods and recover appropriately from common failures.

4.5 Maintainability and Scalability

- NFR-15: The design shall allow future functions to be added without redesigning the core member structure.
- NFR-16: Church associations and leadership positions shall be maintainable as configurable records.
- NFR-17: The system shall be organized into maintainable components to support testing and future enhancement.

4.6 Data Integrity

- NFR-18: Required fields shall be validated before records are saved.
- NFR-19: Organizational relationships shall maintain referential consistency.
- NFR-20: Important identifiers shall not be duplicated.
- NFR-21: The system shall prevent invalid relationships between members, Families, and organizational units.

5. Business Rules

- BR-01: A Church member shall belong to an appropriate Family within the Church hierarchy.
- BR-02: The hierarchy shall follow Diocese → Deanery → Parish → Zone → Small Christian Community → Family → Church Member.
- BR-03: Church associations and leadership positions shall be managed independently from the core personal profile.
- BR-04: A member identification number shall be unique within the system.
- BR-05: Access to member information shall depend on the user's authorized role and organizational responsibility.
- BR-06: Important changes should preserve appropriate historical information.

6. Data Requirements

6.1 Church Member Data

- Member identification number / offering number / digital offering number.
- First name, middle name, and last name.
- Date of birth.
- Marital status.
- Phone number and email address.
- House number, street, ward, district, and region.
- Baptism status.
- Family and organizational-unit associations.
- Church association information where applicable.
- Leadership position information where applicable.

6.2 Reference Data

- Diocese; Deanery; Parish; Zone; Small Christian Community; Family; Church Association; Leadership Position.

7. System Constraints and Assumptions

- The system is intended for authorized Church personnel and will not provide unrestricted access to member information.
- Exact user roles and permission boundaries will be confirmed during detailed requirements analysis.
- Rules governing multiple Church associations or multiple leadership positions will be confirmed with responsible Church authorities.
- The initial implementation will focus on the information and functions identified in the concept note; additional modules will be treated as future enhancements unless approved.

8. Requirements Traceability

The requirements in this SRS are derived from the concept note's objectives, proposed hierarchy, scope, security requirements, and expected outcomes. The concept note specifically identifies member registration, organizational relationships, personal/contact/residence/baptism/identification information, Church associations, leadership positions, secure searching and reporting, and future expansion.

9. Acceptance Basis

The system will satisfy this SRS when the agreed functional requirements are implemented and tested, authorized users can perform permitted operations, organizational and member relationships are maintained correctly, identifiers are validated and protected, and the specified security, reliability, usability, and maintainability requirements are demonstrated.

10. Conclusion

This SRS provides the baseline for designing and developing the Catholic Church Member Information and Management System. It converts the approved project concept into testable functional and non-functional requirements while preserving the proposed Church hierarchy and focus on member, Family, association, leadership, security, and reporting information.
